dskorton@aamc.org

Dear Dr. Skorton

On behalf of more than 20,000 physicians, residents, and medical student members of the Pennsylvania Medical Society (PAMED) thank you for the work you have been doing to adapt to the challenges brought about by the COVID-19 pandemic and your commitment to medical students. In addition to the stress brought about by the pandemic itself, the anxiety experienced by our medical students has been even further amplified. The focal point of this stress is the issues with Prometric's administration of the USMLE and COMLEX-USA exams.

I obviously don't have to remind you about the high stakes of these exams, and the level of stress that comes along with them under ordinary circumstances. When you factor in the uncertainty of exam dates, exam location closings, cancellation of exam dates, uncertainty of when exam locations will reopen and whether exams can be rescheduled, etc. due to the pandemic, our medical students are facing an unfathomable situation that may impact their professional future within medicine. Despite all of this, many students still prefer to move forward with taking these exams.

As such, PAMED agrees with other state medical societies that consideration must be given for actions to address the current issues surrounding the administration of the USMLE and COMLEX exams. Specifically, PAMED recommends that medical schools be permitted to collaborate with Prometric, the National Board of Medical Examiners, and the National Board of Osteopathic Medical Examiners to administer and proctor USMLE Step or COMLEX-USA exams on medical school campuses. Allowing students to take exams at their home institution or another that works best for them will enable adherence to social distancing and reduce the level of risk for everyone involved.

Additionally, PAMED agrees with the Medical Society of the State of New York that standardized testing should not be required by schools for advancement or serving clinical rotations, and that students be allowed flexibility for standardized test-taking at this time. Therefore, PAMED respectfully proposes the following:

Dear Mr. Simrell

On behalf of more than 20,000 physicians, residents, and medical student members of the Pennsylvania Medical Society (PAMED) thank you for the work you have been doing to adapt to the challenges brought about by the COVID-19 pandemic and your commitment to medical students. In addition to the stress brought about by the pandemic itself, the anxiety experienced by our medical students has been even further amplified. The focal point of this stress is the issues with Prometric's administration of the USMLE and COMLEX-USA exams.

I obviously don't have to remind you about the high stakes of these exams, and the level of stress that comes along with them under ordinary circumstances. When you factor in the uncertainty of exam dates, exam location closings, cancellation of exam dates, uncertainty of when exam locations will reopen and whether exams can be rescheduled, etc. due to the pandemic, our medical students are facing an unfathomable situation that may impact their professional future within medicine. Despite all of this, many students still prefer to move forward with taking these exams.

As such, PAMED agrees with other state medical societies that consideration must be given for actions to address the current issues surrounding the administration of the USMLE and COMLEX exams. Specifically, PAMED recommends that medical schools be permitted to collaborate with Prometric, the National Board of Medical Examiners, and the National Board of Osteopathic Medical Examiners to administer and proctor USMLE Step or COMLEX-USA exams on medical school campuses. Allowing students to take exams at their home institution or another that works best for them will enable adherence to social distancing and reduce the level of risk for everyone involved.

Additionally, PAMED agrees with the Medical Society of the State of New York that standardized testing should not be required by schools for advancement or serving clinical rotations, and that students be allowed flexibility for standardized test-taking at this time. Therefore, PAMED respectfully proposes the following:
